

## Telecom and Technology Matching Grants Available

The New Hampshire Division of Economic Development has announced the availability of Telecom and Technology Matching Grants. This matching program's intent is to stimulate projects to enhance the supply, demand, utilization or access of digital communications, especially to underserved areas. It is also used to develop investments in technology that could create substantial economic gains. Funds need to be matched at least dollar-for-dollar, and recipients are limited to public or not-for-profit entities.

A total of \$100,000 in dollar-for-dollar matching grants have been set aside with initial grant awards limited to up to \$10,000 per project. Applications are available immediately and will be accepted until June 15, 2007.
